PROFESSIONAL SUMMARY

Software developer building full-stack web apps with React and Python (FastAPI). I deployed a visual workflow editor with backend loop detection, wrote automated Playwright tests that run in CI, and I'm building an AI voice interview app with Next.js. Looking for a frontend, backend, full-stack or QA automation role.

SKILLS

- Languages:** Python, JavaScript, SQL
- Frontend:** React, React Flow, Zustand, Next.js, HTML, CSS
- Backend:** FastAPI, REST APIs, JWT Authentication, Webhooks
- Database:** PostgreSQL, Supabase
- Testing:** Playwright, Test Automation, Page Object Model, GitHub Actions (CI)
- Tools:** Git, GitHub, ServiceNow, Vercel, Render

PROJECTS

Pipeline Builder | React, React Flow, Zustand, FastAPI, Python | [GitHub](#) | [Live Demo](#)

- Built a drag-and-drop workflow editor with 9 node types using React and React Flow.
- Typing `{{variable}}` in a Text node creates input handles live; node and edge state is kept in a Zustand store.
- FastAPI endpoint receives the graph and checks it is a valid DAG using DFS cycle detection.
- Frontend deployed on Vercel, backend on Render.

Playwright Web Testing Suite | Playwright, JavaScript, GitHub Actions | [GitHub](#) | [Live](#)

- Wrote 19 automated end-to-end tests for a shopping web app covering login, search, filter, sorting and cart flows.
- Used the Page Object Model and beforeEach setup: actions live in page objects, assertions stay in the tests.
- GitHub Actions runs the tests on every push and saves the HTML report.

InterviewLoop | Next.js, JavaScript, PostgreSQL, Supabase, Vapi | [GitHub](#) | In progress

- Building an AI voice mock-interview app with Next.js and the Vapi API.
- JWT login, with users and interview sessions stored in PostgreSQL (Supabase); Vapi webhooks connected for live interview calls.
- Still building: saving transcripts and generating feedback reports.

PROFESSIONAL EXPERIENCE

Freelance AI Code Evaluator | Deccan AI Feb 2026 – Present

- Review AI-written Python code for correctness, efficiency and whether it does what the task asked.
- Run the code, find bugs and logic errors, and write up what is wrong.

Graduate Trainee | HCLTech Oct 2024 – May 2025

- Wrote and ran SQL queries on a PostgreSQL database using pgAdmin to fetch, filter, sort and summarize data for service requests.
- Used SELECT, WHERE, ORDER BY, GROUP BY, COUNT and JOINS to get the exact data requested.
- Verified query output and exported results to CSV for requesters.
- Documented queries, results and steps in ServiceNow work notes and knowledge articles.

EDUCATION

B.Tech. in Electrical Engineering- Government College of Engineering, Amravati (GCOEA) | CGPA: 7.62 | 2020-2024
