

PROFESSIONAL SUMMARY

Full stack developer with 1.5 years of hands-on experience building production-grade web applications and monitoring tools. Built a workflow automation platform from scratch using React and FastAPI, implementing complex features like drag-and-drop interfaces, DAG validation, and real-time system monitoring. Currently evaluating AI-generated code for accuracy and best practices at Deccan AI. Focused on writing clean, maintainable code and solving real problems through thoughtful engineering.

TECHNICAL SKILLS

Languages: Python, JavaScript
Frontend: React.js, React Flow, HTML, CSS, Recharts
Backend: FastAPI, REST APIs
Tools & Platforms: Git, GitHub, VS Code, Zustand
Core Concepts: Data Structures & Algorithms, OOP, Graph Theory (DAG), API Design, State Management

PROJECTS

Pipeline Builder | React, React Flow, FastAPI, Python

- Built a drag-and-drop pipeline editor that lets users visually design and validate complex workflows without writing code
- Developed five reusable node types (Input, Output, Text, LLM, Note) with custom logic for dynamic connections
- Implemented smart variable detection using `{{variable}}` syntax that automatically validates input-output relationships
- Created backend validation API with DAG-based loop detection to prevent circular dependencies and ensure executable workflows
- Managed global state across components using Zustand for clean, predictable UI updates

Mission Control Dashboard | React, FastAPI, Python, Recharts

- Built a real-time system monitoring dashboard that tracks CPU usage, memory consumption, and disk space with live updates
- Implemented polling-based data fetching from FastAPI backend that reads system metrics using Python libraries
- Designed error detection system with threshold monitoring that logs and displays alerts when system resources exceed safe limits
- Created interactive data visualizations using Recharts to display system performance trends over time

PROFESSIONAL EXPERIENCE

Freelance AI Code Evaluator | Deccan AI

Feb 2026 – Present

- Evaluate AI-generated code against user prompts for correctness, efficiency, and adherence to best practices
- Debug and refactor problematic code across Python and JavaScript, identifying common AI failure patterns
- Perform quality assurance on LLM outputs to ensure they align with user intent and production standards

Associate – Operations Support | HCLTech

Oct 2024 – May 2025

- Managed enterprise-level service tickets and access provisioning while maintaining 98% resolution rate within SLA timelines
- Collaborated with cross-functional teams to troubleshoot technical issues, document solutions, and improve operational workflows
- Analysed recurring ticket patterns and worked with technical teams to identify root causes, reducing repeat issues in the access provisioning workflow

EDUCATION

Government College of Engineering, Amravati (GCOEA)

B.Tech. in Electrical Engineering | CGPA: 7.62

2020-2024

CERTIFICATIONS & COURSES

Programming in Python – Meta | Databases for Backend Development – Meta | Version Control – Meta

LANGUAGES

English, Hindi, Marathi
